

RENAISSANCE GOLD INC.

TSX.V:REN / OTCQB:RNSGF

WWW.RENGOLD.COM

Successful Explorer in Nevada

Renaissance Gold is a prospect generator exploring for gold and silver deposits in the Great Basin of the western U.S. Renaissance is the spinout of the highly successful AuEx Ventures,

Inc. that brought the Long Canyon gold deposit and the Pequop Gold District to prominence and created tremendous shareholder value. Since 2017, Renaissance has completed 12 new property agreements and drilled nine partner funded projects, representing a high level of execution of our business, supporting the search for our next discovery

Nevada Focused

Today we have just 62 million shares outstanding

The tight share structure allows for a potentially meaningful per share appreciation that could result from a discovery. Our current portfolio of exploration projects in Nevada includes a mix of grass roots and more advanced projects. The portfolio approach reduces exploration risk associated with any one property and improves our chances of making a discovery.

Exploration Expertise

Renaissance is confident that management's extensive exploration experience and state of the art technical capability that guided AuEx into a major discovery at Long Canyon will continue to direct the Company to new discoveries resulting in strong growth potential for shareholders. The Company believes that its prospect generator/joint venture business model is the most effective strategy for junior explorers by minimizing dilution of shareholders and leveraging risk to partners.

“The proven Renaissance team, large high-quality project portfolio and quality joint venture partners create wealth through discovery.”

High-Quality Nevada Portfolio

Properties available for joint venture

Carlin-type targets

Ghost Ranch – Shallow pediment with pronounced NW structural fabric and anomalous Carlin-suite geochemistry on trend with Long Canyon

Maggie Creek – Gold bearing dikes and upper plate exposures adjacent to Newmont’s Gold Quarry mine in the core of the Carlin trend

Raven – District-scale target on the Rabbit trend with multiple gold cells in upper plate and limited tests of lower plate carbonates

Diamond Point – 3 km long structurally controlled gold system in the Carlin trend with no drill tests of favorable stratigraphy

South Roberts – Shallow pediment gold target on the Battle Mountain-Eureka Trend. Large NW trending gravity break associated with Carlin geochemical signature.

Epithermal Au-Ag targets

Gilbert South – Kilometer wide gold-bearing vein swarms associated with dacite domes

Secret Canyon – Multi-gram gold mineralization at surface in northeast trending fault zones adjacent to Kinross/Premier project in the Goldbanks district

Fireball Ridge – Outcropping quartz-adularia veins with high grade gold mineralization in historic drilling and newly defined, untested structural model

Intrusion-related targets

Buffalo Canyon – Gold system containing stockwork and sheeted gold-quartz-tourmaline veins proximal to reduced intrusion, and distal mesothermal gold and base metal-bearing quartz veins

Manhattan Gap – New gold-rich polymetallic replacement targets in the historic Pioche (Pb-Zn-Ag) district
