

High-Quality Nevada Portfolio Properties available for joint venture

Carlin-type targets

Ely Springs – Cambro-Ordovician hosted Au-Ag target peripheral to the polymetallic Pioche district

Ferguson Mountain – Gold target hosted in favorable Devonian unconformity host rocks

Maggie Creek – Gold bearing dikes and upper plate exposures adjacent to Newmont's Gold Quarry mine in the core of the Carlin trend

Raven – District-scale target on the Rabbit trend with multiple gold cells in upper plate and limited tests of lower plate carbonates.

Wood Hills South – Undrilled carbonate horst block along a northeast trending dike swarm southwest of Long Canyon

Intrusion-related targets

Golden Shears – Gold rich, zoned polymetallic carbonate replacement system with untested geophysical anomalies under shallow alluvial cover

Epithermal Au-Ag targets

Trinity Silver – Rhyolite dome hosted silver deposit with historic open pit and existing resource and significant exploration potential

Fat Lizard – Untested outcropping epithermal vein swarm

Fireball Ridge – Outcropping quartz-adularia veins with high grade gold mineralization in historic drilling and newly defined, untested structural model

Gilbert South – Kilometer wide gold bearing vein swarms with newly defined dacite dome target model

Jake Creek – Northern Nevada rift epithermal vein system with up to 11.3 g/t gold in historic drilling. Open in several directions

Secret Canyon – Multi-gram gold mineralization at surface in northeast trending fault zones adjacent to Premier's Goldbanks district.

“The proven Renaissance team, large high-quality project portfolio and quality joint venture partners create wealth through discovery.”

Successful Explorer in Nevada: Renaissance Gold (TSX-V:REN) is a prospect generator exploring for gold and silver deposits in the Great Basin of the western U.S. RenGold is the spinout of the highly successful AuEx Ventures, Inc. that brought the Long Canyon gold deposit and the Pequop Gold District to prominence and created tremendous shareholder value. In 2017, Renaissance further expanded its influence as a prospect generator with the acquisition of Kinetic Gold Corp, adding 9 high quality projects to the portfolio and strengthening the management and technical team.

Nevada Focused

Today we have just 49 million shares outstanding: The tight share structure allows for a very meaningful per share value appreciation that will result from discovery using the joint venture business model. Our current portfolio of exploration projects in Nevada and Utah includes a mix of grass roots exploration targets and more advanced projects. The portfolio approach reduces exploration risk associated with any one property and creates a higher probability of success.

Exploration Expertise: Renaissance is confident that its extensive exploration experience and state of the art technical capability that guided AuEx into a major discovery at Long Canyon will continue to direct the Company toward new opportunities and new discoveries resulting in strong growth potential for shareholders.

Discovery Driven

Joint Venture Business Plan: The Company believes that its prospect generator/joint venture business model is the most effective strategy for junior explorers without positive cash flow.
